Description

A cylindrical internally threaded fastener, open at both ends with a low profile head at one end and a short, chamfered lead at the opposite end. It can be installed into a prepared hole from the blind side of the ultimate fastening. The outer surface of the insert has ribs (or splines) that extend from under the head toward the opposite end. The insert is threaded onto mandrel of installation tool and positioned into hole. As mandrel is pulled back, the insert is expanded into the base material it is now gripping. Installation is complete when the mandrel of the tool is removed from the set insert.

Applications / Advantages

Ease of installation makes blind threaded inserts a low-cost way to provide threaded holes in thin sheet metal. Low profile head design enables insert to be nearly flush once it is set in place. Ribbed contour of the body provides resistance to turning.

Material

Aluminum: 5056 Aluminum or ALMG 3 alloy
Steel: 1006 - 1008 low carbon steel
