BODY

RESONANCE & ACCENTUATE

Accent Prime is the clinically proven body contouring and skin tightening solution. This two part treatment combines the innovations of Ultrasound and Radio Frequency technology to comfortably shape and tighten large areas of the body.

The unique Resonance of the Ultrasound use guided waves that encompass a middle longitudinal wave to direct a controlled damage to the membrane of the fatty cells to breakdown the targeted tissue.

Accentuate is the newest technology in Radio Frequency body contouring and uses hands-free stationary applicators to deliver the 40.68 MHz unipolar AlmaWave Radio Frequency resonant-distributed waves. These waves create a safe, even heat, that reaches deep into the dermis to increase metabolism following fat destruction whilst also contracting collagen fibres to stimulate the formation of new collagen.

CELLCOSMET BODY

SWISS ANTICELLULITE

Reduces the uneven appearance of cellulite, visibly redefines the contours of the silhouette, drain toxins, nourish and hydrates the skin.

Duration
75 minutes

£180

CELLCOSMET BODY DETOX

A four phase body treatment that drains toxins, deeply cleanses whilst nourishing and softening the skin. Spectacular repairing action on problem skin and blemishes.

Duration
90 minutes

£250

BIO REVITALISATION TREATMENT

The PRX-T33 formula combination of 33% TCA and 67% hydrogen peroxide quickly penetrates the dermis, activating a process of regeneration without attacking the epidermis. Promoting stimulation of fibroblasts and growth factors without causing inflammation or damaging the skin, PRX-T33 is suitable for all skin types. A non photosensitising treatment, it can be performed all year round.

A unique alternative to injectable treatments & peels. Ideal for:

- Loss of firmness of the skin on the face and chest
- Firming of the skin on breasts
- Depressed scars
- Stretch marks
- Adjuvant in the treatment of melasma and cutaneous hyperpigmentation
- solar lentigines and elastosis
- bio-revitalisation

PRX-T33 is effective as a single treatment but can also be used in combination with other aesthetic medicine treatments such as PDO threads, micro-needles and fractional lasers to enhance the effects.

RF UNIBODY

UniBody combines the newest technology in Radio Frequency body contouring with a massage ring which increases circulation. The Radio Frequency hand held device delivers the 40.68 MHz unipolar AlmaWave Radio Frequency resonant-distributed waves. These waves create a safe, even heat, that reaches deep into the dermis to increase metabolism whilst also contracting collagen fibres to stimulate the formation of new collagen, tightening the skin. Simultaneously the massage ring decreases the volume of body fluid and whilst increasing the circulation within the subcutaneous tissue to help clear the lymphatic system.

Duration
60 minutes

ANTI PIGMENTATION LASER

Hormonal changes as we go through life-cycles can affect the body's distribution of melanin to the skin. Melanin is what controls the colouration of our skin and when this becomes affected it can lead to the appearance of sunspots, age spots, and melasma (a dark patchy facial discolouration).

ENDOSPHERE THERAPY

The Endosphères Therapy® COMPRESSIVE® MICROVIBRATION is a revolutionary step ahead in the aesthetical and rehab medicine field. Its innovative and effective in complex pathologies such as lymphoedemas and cellulite.

This method shows results after only a few sessions, and substitutes surgical therapies. The Compressive Micro-vibration® works on the skin with a cylinder attached to a joystick made of 55 rotating spheres.

The variation of the cylinders speed determines the frequency (from 40 to 254 hz). The rotation and the pressure have a pump effect on the tissues. The right combination of these forces determine the intensity one needs to operate on each patient.

The unification of tissues thanks to the break-up of fats, the draining action, the tissue's breathing, the repairing of the flora, the increase of skins temperature are the most effective effects that derive from the Endosphères Therapy® treatment.

The Endosphères Therapy® acts on the muscle a continuous and protracted tense action, allows the fibres to lengthen, making them elastic and eliminates the contraction in only a few sessions. Many researches made at the "U. G. D'Annunzio" university, the I.T.A.B. (Institute for the advanced biomedical technologies) have proven the Compressive® Microvibration Endosphères Therapy's effectiveness among the panniculites and the secondary lymphoedema.

The Endosphères Therapy® is secure and non invasive, it does no damage to varicose veins and lymphatic ducts; the treatment has also effect on pain therapies.

The Endosphères Therapy® is fundamental during the treatment of the chronic lymph gland rehab program. Its also handy for the therapist that treats lymphatic draining. In patients affected by chronic secondary lymphoedema, simple panniculite and knotty inflammation results were fast and exceptional.

SMA BODY CONTOURING
- HIFU LAB

SMA Body Contouring - HIFU is an exclusive technology also used to reshape the body. The characteristic that makes SMA Contouring - HIFU such an extraordinary technology, is the possibility of using a significant power intensity in a short time and in a concentrated manner (focused diagram).

SMA Body Contouring - HIFU LAB uses high-frequency focused ultrasounds. Its powerful thermal effect can be used for targeted reshaping of the abdomen, hips, inner and outer thighs, buttocks and inner arms. Using the **13 millimetre head**, SMA - HIFU is also able to provide deep set body treatments with the following benefits: Decrease in located adipose and imperfections caused by icellulite and firming and toning of tissues.

DERMAPEN

Micro-needles are 0.5-1.5 mm in length. During treatment, the needles pierce the stratum corneum and create microconduits (holes) without damaging the epidermis. Microneedling leads to the release of growth factors which stimulate the formation of new collagen (natural collagen) and elastin in the papillary dermis. In addition, new capillaries are formed this neovascularisation and neocollagenesis following treatment leads to reduction of scars. The procedure is therefore aptly called "percutaneous collagen induction therapy" and has also been used in the treatment of photoageing.

The new collagen matrix then becomes cross-linked and organised during the re-modelling phase, which can continue for up to 12 months. Each dermal treatment triggers the normal healing response within the skin and successive treatments build new collagen progressively and fills in depressed scars, deep lines and much more.

Using 540 extremely fine medical-grade gold and titanium needles, the Derma-roller painlessly creates micro-channels in your skin which trigger the body's natural healing process to create new, healthier tissue to replace the imperfections of older skin. By renewing your skin cells regularly, it helps the following:

- Reduces lines & wrinkles on face and body
- Helps with skin firmness and elasticity
- Reduces or eliminates face and body scars
- Helps even out pitted skin
- Helps reduce Sun damages
- Helps Hyper-pigmentation
- Reduces stretch marks
- Helps reduce cellulite

ZERONA COLD LIPOLASER

The cold laser technology behind the Zerona procedure was shown to exclusively release the cellular contents of fat cells while leaving the capillaries and other cells within the interstitial space intact. The release of the fat cell contents is the result of the disruption of the cell's membrane. This membrane disruption, called a transitory pore, is the result of low-level laser stimulation.

The Zerona cold lasers provide clients with a safer alternative to surgical procedures, which can result in bruising, swelling, and damage to other tissues. There is no need to wear bandages with Zerona and since there is no pain, there is no need for anesthesia. Unlike other non-invasive approaches, Zerona low-level lasers do not rely on heating tissue, which can cause discomfort. There is no downtime, so clients can resume their normal activities immediately.

Each session takes less than an hour; the low-level laser is used for a total of 40 minutes. The laser is applied to the targeted area, which is generally a combination of the waist, hips, and thighs, for 20 minutes. The client then turns over and the very same treatment is applied to the opposite side. The minimum suggested treatment period is two weeks, with three full sessions each week.

You simply lay in a comfortable, stationary position for twenty minutes at a time, in a relaxed environment, while the cold laser does all the work. Since the Zerona uses cold laser technology, you feel nothing during the procedure. You may feel a bit different and lighter as you exit the treatment center due to the bio-stimulation that begins in your body.

IPIXEL TEXTURE AND TONE

Age inevitably takes hold of us and as blemishes, and age spots may begin to show, the texture of our skin changes, becoming coarse and uneven.

The iPixel laser creates pixel-sized perforations in the skin. The perforations heal, a process called epithelization. The acceleration of re-epithelization can be considered exercise for the skin. Leaving the skin looking younger and smoother.

LEG VEINS

Spider veins form when valves weaken and the blood begins to pool rather than flow to the heart. As this happens the blood vessels become enlarged and visible on the skin. A Long pulsed laser uses a combination of technologies to close these vessels as well as a sold sapphire tip to cool the skin during treatment for longer periods of time. Leaving you with smooth clear skin in a more comfortable treatment.

Long pulsed technology is directed at the hemoglobin and oxyhemoglobin chromophores closing the veins leaving their appearance reduced or completely eliminated in a process called photothermolysis.

HAIR REMOVAL

Alma Laser Hair Removal is an innovative technique in the field of high-end hair removal treatments, thanks to its power, precision, sand utmost effectiveness.

• Specific analysis of the area to treat, for a precise and impeccable epilation. The prototype detection device is a paramount step to obtain outstanding results.

NAIL FUNGUS

Fungal infections in the finger and toe have proven difficult to treat with traditional medications and creams. However the QS and LP Lasers are the clinically proven solution to targeting infection beneath the plate and clearing nail fungus in a few short treatment sessions.

The QS creates micro-cavitation and acoustic shockwaves breaking the hard outer shell of the fungus spore and heating up the area beneath the nail bed whilst the LP causes non-specific heat conduction, thermally deactivating the unwanted micro-organism.

Duration Approx
30mins

Price from £50

• The treatment is performed quickly, even on wide areas.
