

Visualising humans online and what this means for fashion e-commerce

Mainda Kiwelu, Senior Product Manager - Metail

Making clothing fit for all

Shoppers experience

1

Body shape is not represented in fashion photography

2

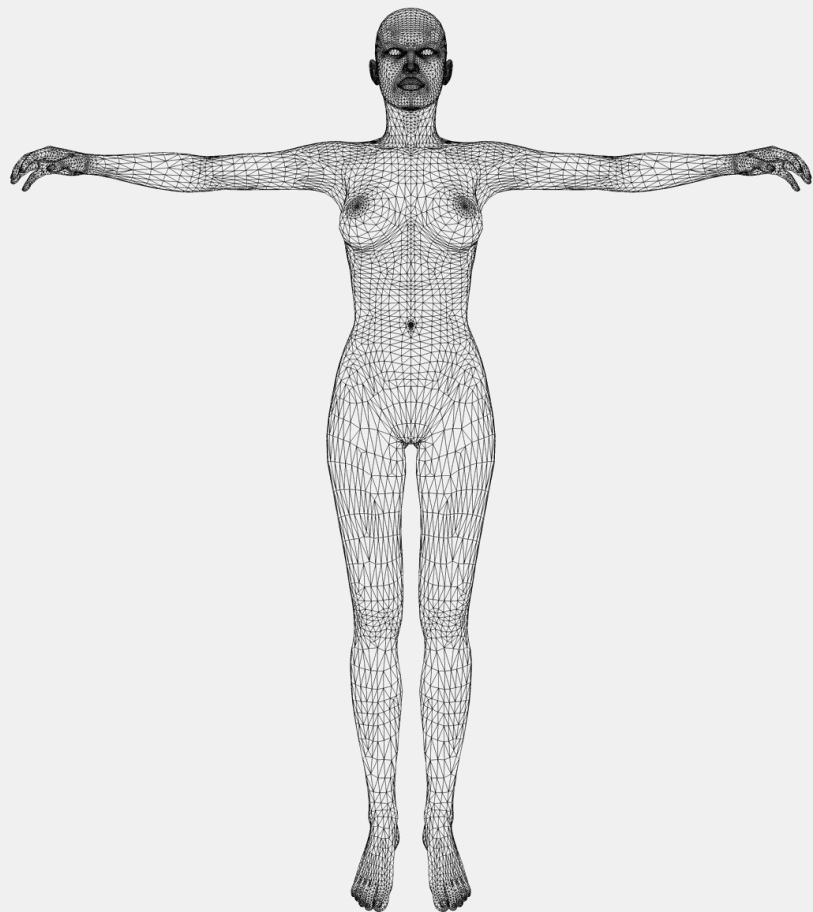

Have low confidence in choosing size

3

Have low confidence in shopping online

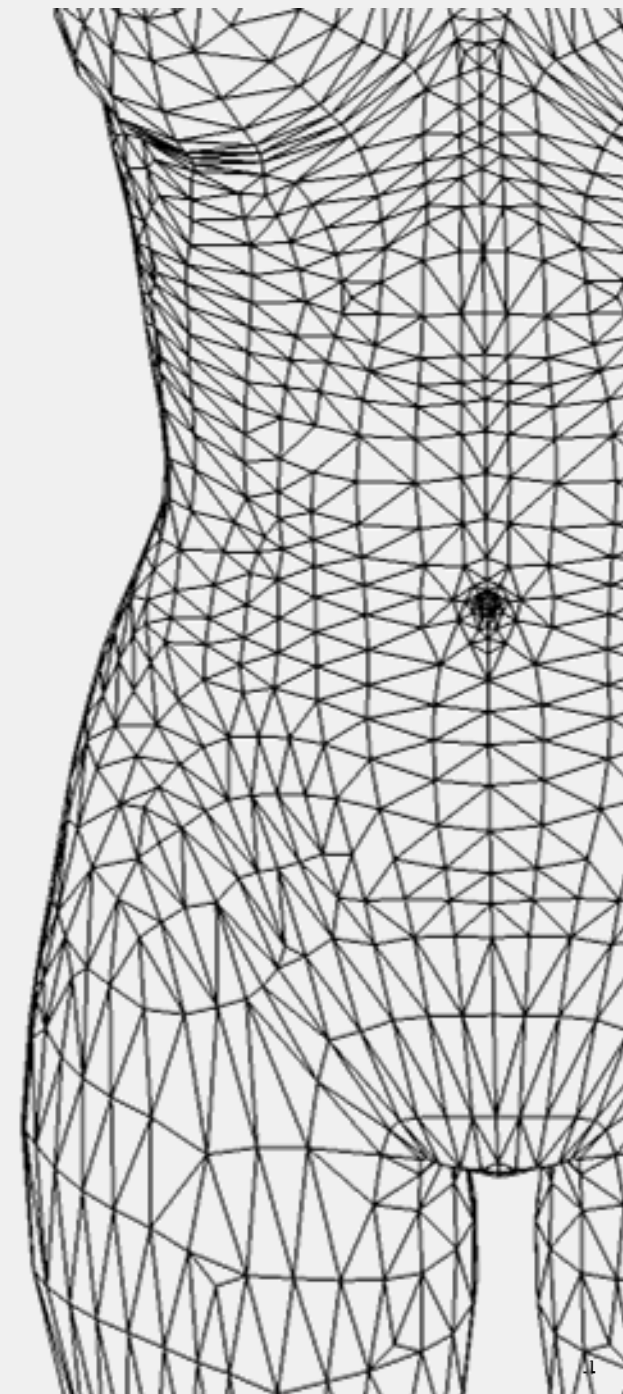

DIGITISATION

BODIES

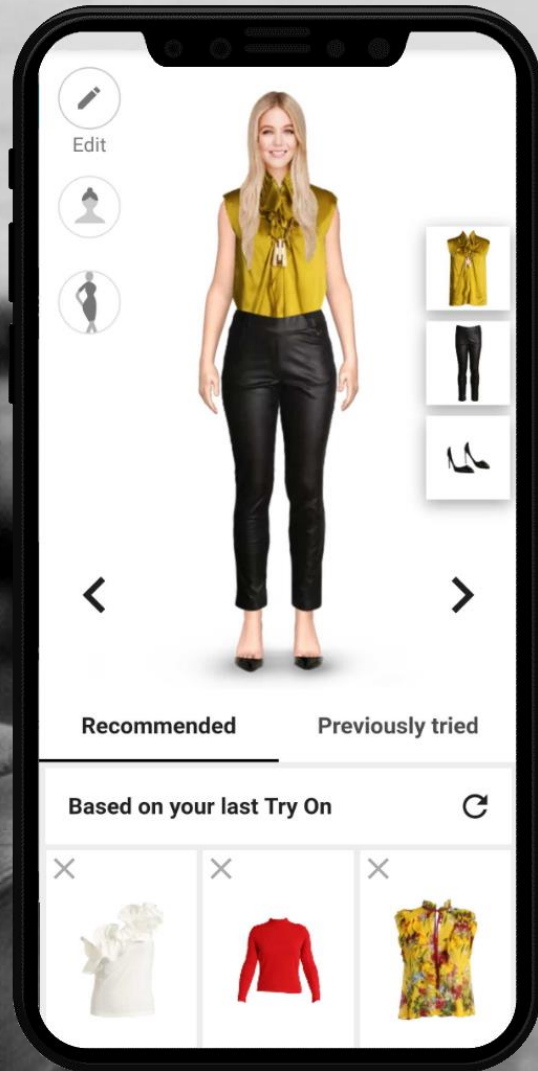

CLOTHES

“I want to see...me”

Imagine what you could do if you knew the size, shape and preference of every consumer?

But...

CHALLENGES

Shoppers experience vs. **What shoppers want?**

1

Consumers want personalisation but slightly tailored – “like me” or “the best version of me”

2

Not easy to change existing experience, needs to be gradual

3

B2B2C - Building for the near term (appealing, relevant) and building for the future (true personalisation for all)

Our 3 core industry insights

Increasing desire for
relatable product imagery

Inexpensive, diverse and flexible
model imagery through
Composed Photography

Finding clothes to make you
feel great in a fun and easy
way is still hard

More engaging experiences
delivering actionable data through
MeModel

Huge inventory waste in the
supply chain

Data on size, shape and
interaction with fashion combined
with
digital design through
Composed Photography (C3D)

Composed Photography: smarter model photography

Models in various poses
only need to be shot
once

Clothes are shot on a
standardised, simple
photography rig

Models are “dressed”
by our proprietary
technology

Allowing diversity to be the new customer norm...

...optimising items and reacting to events, weather

...whilst empowering creativity of stylists for women

... and for men

Connecting consumers to their influencers

Composed 3D:

Imagine if designers could see their designs come alive on real bodies and consumers could **see and try-on clothing not yet made?**

Render to C3D using photographed model avatar input

C3D: Positive by-products on the road to personalisation

SPEED TO MARKET

Supply chain today is long and archaic

Metail enhances speed to market

- Streamline supply chain
- Mix and match endless combinations of clothing
- Allows for very direct target marketing

INVENTORY RISK

Partner + Metall Sales Flow

C3D Design

Pre-order

Manufacture

Receive

- Present more designs before manufacture with C3D
- Earlier consumer validation of designs on models enables better ordering and less unsold inventory

Making clothing

for all
