

## Butcher Block Leg Pattern

The classic profile of the legs has been tweaked to make them easily to wipe down and keep clean. The open and sweeping nature of the beads and coves gives dust and grime no place to accumulate. The profile works well and blends in nicely with the design of the project.

The drawing below gives you measurements that match the profile of the leg.

Also, on the following three pages is a full-size pattern. After printing them, assemble the three pages by aligning the red registration lines to each other and tape them together. Folding the paper plan down the centre will allow you to mark datum lines and read off dimensions. If you have a duplicator attachment for your lathe you might like to use the pattern to make a Masonite template to follow while turning the parts.
