

“We are thorough and thoughtful about what we do, and we do our homework,” says Cross. “When we talked to other extraction system companies, we just didn’t see the same commitment to quality and customer care that they have at IES. Their products are excellent, and the people are even better. They’ve become one of our most important partners.”

“Reliability is crucial for us. The IES systems are dependable and durable and we get our questions or concerns addressed quickly. Their service and responsiveness are incredible.”

WONDERLEAF™

LAB-CRAFTED APPROACH DRIVES QUALITY AND PRODUCTIVITY

Cross says WonderLeaf quality starts with the right people. All lab team members have a science background, so research, development and production are conducted using the highest standards and best practices for cleanliness and control.

Next comes plant selection. Cross and his team visit growers in person to evaluate their growth and harvesting methodologies.

Finally, thanks to his education as a psychobiologist, Cross is also keenly aware of the benefits of using CO2 as a solvent for essential oil extraction.

“We use the IES CO2 systems because they give us much tighter control of our pressure and temperature settings,” says Cross. “All of our extractions begin by gently isolating the terpenes from freshly ground material, this way we preserve the full array of terps so that they are not lost in the extraction process.”

“Using the IES machines means that our oils never need to be winterized, distilled, or chemically altered in any way. That way, they remain as close to their parent strains as possible,” says Cross.

IES PERFORMS – AND INNOVATES – AS PROMISED

WonderLeaf uses two IES systems for production: a first-generation 5-liter pneumatic, and its latest innovation, a 10-liter hydraulic which not only adds capacity but also triples processing speed.

The versatility of the IES systems allow WonderLeaf to execute their signature “low and slow” extraction process which ensures taste and consistency.

IES also provides comprehensive support that includes data logging, regular maintenance check-ups, and on-call troubleshooting.

“Reliability is crucial for us,” says Cross. “The IES systems are dependable and durable and we get our questions or concerns addressed quickly. Their

IT PAYS TO BE CRAZY ABOUT QUALITY

- WonderLeaf, a small-batch, craft producer of raw, uncut, and strain specific products, based in Denver, focuses on quality, taste and chemical-free processing for their cannabis oil vapes, cartridges and concentrates.
- The company produces its essential oils using food-grade CO2 extraction systems from IES (Isolate Extraction Systems) to control terpene levels and preserve cannabinoid potency.
- Using IES systems, WonderLeaf maintains a more efficient and productive extraction process that yields a cleaner, purer and more enjoyable premium product for its most discerning customers.

service and responsiveness are incredible.”

Cross says working with a trustworthy partner like IES is becoming even more important as the stakes for WonderLeaf go up. Growth in the coming months and years will come from new topical products, dabbable products and licensing agreements.

“IES systems helps us cater to connoisseurs who are looking for premium products and want a top-shelf experience. And they help us deliver better than anyone on the promises of taste and purity,” says Cross. “IES systems are solid, the people are great, and we couldn’t be happier with the partnership.”
