

WONDERLEAF GAINS MORE PURITY - AND PROFITS - WITH IES CO2 EXTRACTION SYSTEMS

WonderLeaf, a small batch, craft producer of strain-specific Vape Cartridges, Syringes and Body Butters, is all about the purity and potency of its products. Led by psychobiologists, trained in the chemistry and biology of the brain, the company is meticulous about its oil production and refinement. To guarantee these high standards, WonderLeaf uses super-critical CO2 extraction systems from IES (Isolate Extraction Systems, Inc.) to ensure maximum reliability, productivity - and purity.

To say that Kelby Cross is obsessed with quality would be an understatement.

He lives it, in his role as Chief Technical Officer at WonderLeaf. And he breathes it, through the artisanal vaping oils he designs and produces at WonderLeaf.

With a psychobiology degree from UCLA, Cross brings the perfect combination of scientist and artist to the world of cannabis oil production and marketing. The WonderLeaf brand is known for its consummate quality and Cross has made it the centerpiece of its growth strategy.

“Everything we do is intended to preserve the integrity of the flower,” says Cross. “We believe that the flavor profile of each strain is just as important as its THC level. We think - and our customers feel this way, too - that it’s a better product and a better experience which is what we strive for at WonderLeaf.”

Quality products come from quality manufacturing which is why WonderLeaf relies on the food-grade, super-critical CO2 extraction systems from IES (Isolate Extraction Systems.)

“IES systems helps us cater to connoisseurs who are looking for premium products and want a top-shelf experience. And they help us deliver better than anyone on the promises of taste and purity. IES systems are solid, the people are great, and we couldn’t be happier with the partnership.”

- Kelby Cross
