

The Back-Stop Range

“Saving you energy, and money...”

“A **58% improvement** in temperature retention, compared to a vehicle with original plastic curtains.” (Source: apetito)

- A breakthrough in cost and energy savings for the food and temperature-sensitive delivery sectors

- Unique header system holds four moveable curtains, creating an outstanding thermal energy barrier, saving enormous costs

- The twin track, pelmet and double line Temprow curtain system is simple and versatile

- Available in either a manual or touch button air-compressed configuration

- Driver-friendly, and easily repaired, replaced or recycled

- Curtains fitted with Bio-Gard anti-bacterial windows

- Available as an option for new goods vehicles, or retrofitted

AVAILABLE IN TWO MONEY-SAVING DESIGNS

- **Back-Stop: fixed or moving.**

Curtains move individually – ideal for small and multiple deliveries.

- **Multi-Stop: fixed or moving.**

Curtains move entirely to the left or right – ideal for palletised deliveries.

What our customers say

"The truck fitted with the Back-Stop system recorded a 58% improvement in terms of temperature retention when compared with the vehicle fitted with the original plastic curtain system." – apetito

"We came across the products at the CV Show last year, and were very impressed. The biggest advantage is that it allows us to gain access from the freezer to the chill end of a vehicle, which is not really possible with other solid split doors. It also creates more space." – Millbrook Foods Limited.

"This product has the potential to revolutionise the way in which companies such as ours operate. It is light years ahead of any similar products on the market right now."

– Ruskim Seafoods Limited.
